Vacuum Lifter AERO-CUBE

Product information

The AERO-CUBE vacuum lifter is a portable lifting device, that is battery-powered. With its compact dimensions and own weight of 20 kilos, it can easily be carried around in your work area without any additional aids. It is provided with two integrated lifting eyes which makes it possible to lift both horizontally as well as vertically. Only thing you need is a lifting device like a crane, pallet truck with a forklift jib, forklift beam or the like.

This vacuum lifter is easily operated due to its clear symbols on the control panel.

A variety of round suction plates is available, so you can lift a wide range of workpieces with this vacuum lifter – on smooth as well as uneven surfaces, like e.g. metal sheets, panels, plastic sheets, glass panes, housings, furniture parts and barrels horizontally as well as vertically.

Max. load capacity horizontally: 250 kg
Max. load capacity vertically: 125 kg
