

Lifting Loop

Product information

Lifting Loop is a lifting device used for mounting on transport anchors. It is easily attached to a crane hook or other lifting equipment through the wire. The wire strap is made of wire with a threaded section at the end that is designed to fit into a transport anchor. It can be used for lifting with an angle of up to 45°. It is important to research the requirements for the maximum angle of the specific anchor to ensure safe and efficient lifting.

Areas of application: Transport anchor with internal threads.

Advantages: The wire rope stop provides an efficient way to attach lifting equipment to transport anchor.

Reducing the risk of accidental disconnection.

Load group: 0.5t -4t.

Technical information: CE marking according to MD 2006/42 EF.
