

Spacer Plate, soft or extra soft Starcon

Product information

The Starcon spacer plate is a polymer product designed to ensure a uniform spacing between elements stacked on each other during transport. By absorbing vibrations, this prevents wear and damage between the concrete elements.

The spacer plate is available in two variants with exact dimensions but different materials. The first variant is a soft version made from ENGAGE material, while the second variant is an extra soft version made from HANWHA—EVA material.

Applications: To protect and secure elements during transport.

Advantages: Cost-effective
User-friendly application

Material: Soft: – EVA, Extra soft: – ENGAGE

Marking: STARCON

Note: The delivery time for the individual products is estimated and if the desired quantity is not in stock, please contact [CERTEX Danmark A/S – Starcon](#) to get information about the applicable delivery time.

Part code	Diameter mm	Material	L mm	W mm	H mm	t mm	R mm	Ød mm	Weight kg	Delivery time
