

Standard vacuum turning units 180°

Product information

moving limits

The 180° turnable vacuum lifters are ideal, for instance, for being able to paint both sides of metal panels. The load can be variably swivelled manually or using an electric motor and comfortably transported in one step to be processed on the front and back.

Functionality

Turning devices enables processing from 2 sides. Transported materials can be pivoted from 0 to 180° with ease. Control both side of a plate for a quality check or fitting of veneer on both side. Turning heavy loads 180° only with a push button.
