

Wire Rope Sheave Polyamid

Product information

Polyamid sheaves extends the wire rope life and reduces the weight to up to 40-60%. The sheaves can be economically cast-to-configuration in a wide range of sizes with a minimum of machining required permitting competitive pricing to hardened steel sheaves. Can be used for general purpose, for example mobile cranes and over head cranes.

Design: Standard sheaves are available in a range of 250 up to 1260 mm outside diameter. They are cast as semi-finished blanks and can be machined to specific customer dimensions as ordered. Custom sheaves can also be made to meet specific size and requirements in dimensions, performance and bearings.

Material: Polyamide (Nylon).

Finish: White or black.
