H-bar Adjustable Spreader Beams PALHR

Product information

The PALHR H-bar adjustable spreader beam is a low-headroom lifting beam for handling loads with adjustable lifting points. It is used when hook positions and secondary beam spacing need to be adapted to the load geometry. Equipped with 4 articulated, rotaring hooks with forged safety latches.

Best used for:

- Industrial lifting where four adjustable hook points are required.
- Applications with limited headroom and varied load dimensions.

Product benefits:

- Adjustable hooks support accurate positioning on secondary beams.
- Adjustable secondary beams help match different load widths.
- Four articulated rotating hooks simplify load connection.
- Forged safety latches support secure hook engagement.
- Delivered with user's and maintenance manual and EC certificate of compliance
