Adjustable Spreader Beams PALR

Product information

The PALR adjustable spreader beam is designed for lifting loads with variable pick-up points while maintaining stable load distribution. Adjustable lower hook positions allow the beam to adapt to different load geometries, helping reduce the need for multiple dedicated lifting beams in industrial handling operations.

Best used for:

- Lifting loads with changing lifting point spacing in workshops, fabrication plants, and maintenance operations.
- Applications requiring adjustable hook positioning and balanced load handling.

Product benefits

- Adjustable hook suspension points with 100 mm pitch spacing.
- Articulated rotating hooks improve load alignment during lifting.
- Forged safety latches help secure lifting attachments.
- Tear-resistant lifting eye suitable for slings and wire ropes.
- No structural welds and FEM 5 classification support demanding industrial use.
- Delivered with user's and maintenance manual and EC certificate of compliance
